DETAILED ACTION

Drawings

1. The drawings filed July 30, 2003 appear to be formal and are acceptable.

Allowable Subject Matter

2. Claims 1-31 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The prior art fails to render obvious the claimed method and system for monitoring a strength of narrow pulsed electromagnetic fields including, inter alia, at least one antenna adapted to detect one or more electromagnetic fields (E-fields) within a range of frequencies and convert the E-fields into radio frequency (RF) signals having energy levels correlated to strengths of the E- fields, at least one peak power measurement subsystem to determine a peak power level of at least one peak RF signal having a maximum energy level and convert the peak power level to power units, and a computer based device adapted to utilize the power units output by the peak power measurement subsystem to determine the strength of the E- field correlated with the peak RF signal. The prior art does show electromagnetic fields. However the present invention, as claimed, cannot be fairly rendered obvious by the prior art.
